

Urban Forest Management Strategy Report Card

Port Moody's Urban Forest Management Strategy (UFMS) was adopted in 2023 and articulates a 30-year vision and goals for the management of our urban forest. This annual report card provides an update on key indicators from our UFMS monitoring plan.

Urban forest expansion and renewal:

on public land (streets, parks and natural areas)*:

3,909 trees planted including 90 street trees

553 trees removed

Port Moody's Plant a Tree giveaway program continued in 2025, providing residents with 375 free trees to help grow the city's urban forest. We also launched an Adopt a Tree program, inviting residents to care for young boulevard trees that support a thriving urban canopy.

on private land

820 trees planted

538 trees removed

375 trees given to residents

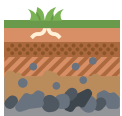

To promote biodiversity, we planted:

- ▶ **16** different families
- ▶ **25** different genera
- ▶ **35** different species/sub-species

and restored or enhanced 13,380m²
of environmentally sensitive natural forest area.

**Green infrastructure
installed on public land:**

11 sites with **structural soil** that retain rainwater below sidewalks and roadways and supports tree root growth.

Canopy cover targets:

Canopy cover refers to the amount of ground that is covered by the foliage of trees when looking from above the trees to the ground below. We are working to:

▶ increase city-wide canopy cover from **58% to 59%**

▶ increase canopy cover outside of parks and industrial lands from **28% to 31%**
